

# FEATURED JOB

## Radars Tower

High on a hill in rural northern New South Wales, Key Scaffolding is at work on a radar tower. Preparatory work on the structure required a 730mm wide Layher Allround scaffold with console brackets and hatch access decks with attached ladders. Finally the protective dome around the antennae was constructed with the aid of a complex circular internal scaffold with a small birdcage at the top. The client was delighted with the result.

Thanks to Peter Lazer of Key Scaffolding Contractors for these photos.
